2
3 #include <cmath>
4 #include <vector>
5
6 using namespace std;
7
8 struct StringMeeting {
9     string start;
10    string end;
11 };
12
13 struct Meeting {
14     int start;
15     int end;
16 };
17
18 vector<Meeting> updateCalendar(vector<StringMeeting> calendar,
19                               StringMeeting dailyBounds);
20 vector<Meeting> mergeCalendars(vector<Meeting> calendar1,
21                               vector<Meeting> calendar2);
22 vector<Meeting> flattenCalendar(vector<Meeting> calendar);
23 vector<StringMeeting> getMatchingAvailabilities(vector<Meeting> calendar,
24                                                int meetingDuration);
25 int timeToMinutes(string time);
26 string minutesToTime(int minutes);
27
28 // O(c1 + c2) time | O(c1 + c2) space - where c1 and c2 are the respective
29 // numbers of meetings in calendar1 and calendar2
30 vector<StringMeeting> calendarMatching(vector<StringMeeting> calendar1,
31                                       StringMeeting dailyBounds1,
32                                       vector<StringMeeting> calendar2,
33                                       StringMeeting dailyBounds2,
```

Solution 1Solution 2Solution 3

```
1 #include <vector>
2
3 using namespace std;
4
5 struct StringMeeting {
6     string start;
7     string end;
8 };
9
10 vector<StringMeeting> calendarMatching(vector<StringMeeting> calendar1,
11                                       StringMeeting dailyBounds1,
12                                       vector<StringMeeting> calendar2,
13                                       StringMeeting dailyBounds2,
14                                       int meetingDuration) {
15     // Write your code here.
16     return {};
17 }
18
```
