Our Solution(s)   Run Code

Solution 1   Solution 2

```python
# Copyright © 2020 AlgoExpert, LLC. All rights reserved.

class BinaryTree:
    def __init__(self, value, left=None, right=None):
        self.value = value
        self.left = left
        self.right = right

# O(n) time | O(d) space - where n is the number of nodes in the Bina
# and d is the depth (height) of the Binary Tree
def flattenBinaryTree(root):
    leftMost, _ = flattenTree(root)
    return leftMost

def flattenTree(node):
    if node.left is None:
        leftMost = node
    else:
        leftSubtreeLeftMost, leftSubtreeRightMost = flattenTree(node.l
        connectNodes(leftSubtreeRightMost, node)
        leftMost = leftSubtreeLeftMost

    if node.right is None:
        rightMost = node
    else:
        rightSubtreeLeftMost, rightSubtreeRightMost = flattenTree(node
        connectNodes(node, rightSubtreeLeftMost)
        rightMost = rightSubtreeRightMost

    return [leftMost, rightMost]
```

Your Solutions   Run Code

Solution 1   Solution 2   Solution 3

```python
# This is the class of the input root. Do not edit it.
class BinaryTree:
    def __init__(self, value, left=None, right=None):
        self.value = value
        self.left = left
        self.right = right

def flattenBinaryTree(root):
    # Write your code here.
    pass
```
